

MOTION SWITCH DETECTOR

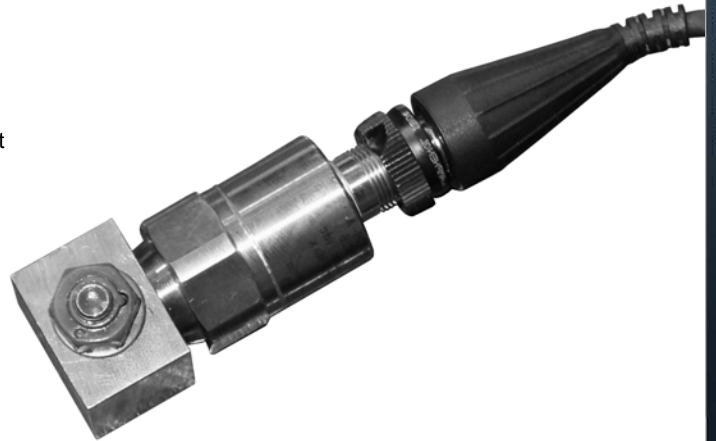

Better engineering. Better performance.

New & improved

You didn't think GK equipment could get any better... Now with the latest technology from GK - the upgraded Motion Detector Switch - it has. This new Motion Switch Detector is a direct replacement to GK's mercury switch motion sensors, and is available in two options:

Digital Motion Sensor
(replaces GK #10-07-166-01)

Digital Motion Sensor w/ Mounting Bracket
(replaces GK #10-07-166-A-KIT)

Features

- This Motion Switch Detector is more durable than any previous motion detector
- Digital accelerometer offers improved sensing and mounting capabilities
- Increased sensitivity adds the ability to use on higher frequency, lower stroke machines
- Switch is activated once the threshold is met, and will remain in fault mode (contact closed):
 - until the unit stroke drops below the threshold (contact will open)
 - until the unit is powered down (contact will remain open)
- New detachable cable can be replaced without removing or replacing the switch itself
