

# TWO-WAY FEEDERS FOR FOUNDRY

## Positively conveys in either direction

General Kinematics innovative Two-Way conveys in either direction with a quiet, smooth, horizontal motion without noise, dusting or damage to fragile castings.

Material flow is easily and immediately reversible automatically or at the touch of a button controlling the rotational direction of a single, low horsepower, self contained drive. Minimal vertical acceleration force permits the noise-free movement of castings, sprue, and other metallic parts with reduced trough wear.
