More Than Just Conveying

Technically advanced vibrating conveyors are a tradition at General Kinematics. No matter how difficult your application, chances are we have solved a similar material flow problem— not only for materials that need to be moved, but a number of processes along the way, including separating, screening, classification, distribution, sorting, inspection, and more. Travel can be up, down, or all around your facility with SYNCRO-COIL® vibrating conveyors.

Features

- SYNCRO-COIL® drive eliminates load dampening
- Heavy-duty construction withstands overloading and impacts
- Optional screening sections to remove fines
- Natural frequency design uses very little energy during operation
- Conveyors can be designed to incline, decline, or go around corners
